05

Summary

01

Django

Installation

- Install pip
- Install suitable version of py:
(3.7, 3.8, 3.9, and 3.10)

Install python

Create Environment

Set up Database

Install Django

create Project

create app

Create Environment

- What is environment?
- Why we need it ?
- Create environment:
→ python -m venv [env name]
- Activate and Deactivate venv :
→ [env name]\Scripts\Activate
→ deactivate

Install python

Create Environment

Set up Database

Install Django

create Project

create app

Set up Database

- We can integrate any database engine (my Sql, postgre, mongoDB)
- In Django, there is (SQL Lite) file.
- To connect Database to project:
 - We make migrations

Search???!!!

In the next session

Install python

Create Environment

Set up Database

Install Django

create Project

create app

Install Django

- Install:
→ `python -m pip install Django`

OR

→ `pip install Django`

Look out !!! you should make activate before.

Install python

Create Environment

Set up Database

Install Django

create Project

create app

Create Project

→ `django-admin startproject [project_name]`

- Project Structure Overview:
 - **Manage.py:** Entry-point for executing various Django commands.
 - **<ProjectName>/:** Main project directory containing settings, URLs, and other configurations.
 - **__init__.py:**
Makes the directory a Python package.
 - **settings.py:**
Contains project settings.

Install python

Create Environment

Set up Database

Install Django

create Project

create app

Create Project

- **<ProjectName>/:**
 - **urls.py:**
Maps URLs to views.
 - **wsgi.py:**
Entry-point for WSGI-compatible web servers.
 - **asgi.py:** Entry-point for ASGI-compatible web servers (for Django Channels).

Install python

Create Environment

Set up Database

Install Django

create Project

create app

Create App

- Notes:
 - cd [ProjectName]
 - Add the app name in InstalledApp in settings file.
- python manage.py startapp [AppName]

Install python

Create Environment

Set up Database

Install Django

create Project

create app

Create App

- App Structure Overview:
 - `<AppName>/:`
 - `__init__.py`
 - `apps.py`
 - `admin.py`
 - `models.py`
 - `tests.py`
 - `views.py`
 - `migrations/`
 - `urls.py`

Install python

Create Environment

Set up Database

Install Django

create Project

create app

Development Server

→ `python manage.py runserver`

- May be difference output because of Migration
- Default port **8000**. you can change server ip later

```
PS D:\Pollapp\mysite> python manage.py runserver
Watching for file changes with StatReloader
Performing system checks...

System check identified no issues (0 silenced).
March 10, 2024 - 13:02:29
Django version 4.0.4, using settings 'mysite.settings'
Starting development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.
```

What is the next ???

Break time!

يحي طارق - Yehia Tarek
@yehiatarek74

بنحل مشاكلنا بكل تفاهم
انا وهي :

The background is a vibrant yellow with abstract black shapes. At the top, a jagged black line separates the yellow from a black area. On the right, three parallel black lines sweep upwards. At the bottom, a wavy black line separates the yellow from another black area. On the left, several parallel black lines sweep downwards.

Terminologies

Terminologies

- ❑ Create **repo** for every **Project**.
- ❑ Create new **branch** for every **Feature**.
- ❑ Anyone can Push and Pull depend on permissions.

Create Repo

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner *

HeshamAbdelatty

Repository name *

Great repository names are short and memorable. Need inspiration? How about **automatic-robot** ?

Description (optional)

Public

Anyone on the internet can see this repository. You choose who can commit.

Private

You choose who can see and commit to this repository.

Initialize this repository with:

Add a README file

This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

.gitignore template: **None**

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

License: **None**

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

You are creating a public repository in your personal account.

Create repository

CMD lines

git clone (Repo link)

git status

- What happened in repo?

Git Clone

 **Registration_Form_Webproject** Public

Releases

No releases published

[Create a new release](#)

Packages

No packages published

[Publish your first package](#)

Git init

Quick setup — if you've done this kind of thing before

 Set up in Desktop or **HTTPS** **SSH** `git@github.com:HeshamAbdelatty/Test.git` 

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# Test" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin git@github.com:HeshamAbdelatty/Test.git
git push -u origin main
```

Look out this link is changing

...or push an existing repository from the command line

```
git remote add origin git@github.com:HeshamAbdelatty/Test.git
git branch -M main
git push -u origin main
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

Import code

CMD lines

- git add *
- git add [folderName]
- git add [folderName\filename.ext]

CMD lines

- git commit -m “description”
You must add description
- git push [Remote Name] [Branch Name]
- git pull [Remote Name]

CMD lines

- git branch (get all branches you have)
- git remote -v

CMD lines

Branching:

- git branch [branch name] (create branch)
- git checkout [branch name] (switch branch)
- git checkout -b [branch name] (create and switch)
- git branch -m [new name] (rename Branch)

CMD lines

We have two ways for to merge:

- Merge branch to main before pushing:
 1. switch to main
 2. git merge [branchname]
 3. push

CMD lines

We have two ways for to merge:

- Push and create pull request:
 1. switch branch
 2. add, commit, push to remote
 3. make pull request

Search ???????

How to "Pull Request"

The background is a solid yellow color. It features several black abstract shapes: a large, irregular shape at the top left, a jagged shape at the bottom right, and several thin, diagonal scratch-like lines on the right and bottom left sides.
